

*"Never thought that teaching becomes an indispensable part of my life.*

*I believe that Math is not as a boring and cold subject as many people thought. In E2, what I have learnt is that Math is not about dealing with numbers but the most critical part is understanding how math can be applied in real life and how to let students to be critical in dealing with math problems."*

## **GINNY NGUYEN**

### **Math Teacher**

Teaching since October 2014

#### **Certificates**

Bachelor of Commerce Honors - Finance & Accounting, RMIT (Vietnam).

#### **Qualified to teach**

Math all levels.

#### **Success cases**

There is one student who firstly applies to study English Class but not Math. One day, Ginny coincidentally became her registered teacher and they spent one hour and a half for Math English class. Thought her target is to improve her English rather than Math, she decided to register to Math session after the 1-and-a-half-hour class. To explain for her registration, the student commented that the Math class is so much fun and interesting in which encourages her need to attend more lessons in the future.
