

"To inspire students to utilize their own untapped skills and potential to succeed in their endeavors and aspirations, I strive to build a relationship with my students where they are confident asking questions and compelled to want more from themselves and me. Once a student has taken their academic development into their own hands, they are in a great position for success."

QUYÊN NGUYỄN

Math Teacher

Teaching since 2016

Certificates:

Associates Degree in Art and Science, Oxford College;

Bachelor of Arts in Anthropology, Emory University.

Qualified to teach

Math all levels;

Test Prep.

Success Cases

Quyên has been working with Phung Nghi for several months. At first, they were not seeing improvements in her test scores despite positive work during lessons. Nghi lacked the motivation and effort. However with as Quyên continued to work with Nghi, he began to understand how she best retains material as well as her work ethic. They worked together to stress the importance of her academics as well as develop test prep that would benefit her. With renewed inspiration, Nghi worked hard, asked questions, and began to take her academic development into her own hands. The dramatic improvement in her scores was not seen until the 13th session in package 2. She was consistently scoring low (D-F), then she was able to score a B (43/51) on her chapter 4 test.
